PROFESSIONAL SUMMARY

Final-year B.Tech IT student skilled in building responsive, component-based UIs and seamlessly integrating them with scalable backends – building full-stack web applications with focus on state management, server-side pagination, RESTful API consumption and database modelling.

EDUCATION

B.Tech — Information Technology *2023 – 2027*

Sri Ramakrishna Engineering College, Coimbatore, Tamilnadu | CGPA: 7.92

Higher Secondary Certificate (HSC) *2022 – 2023*

Vivekam Matric Higher Secondary School, Coimbatore, Tamilnadu | 88.3%

TECHNICAL SKILLS

Languages & Web: JavaScript, HTML, CSS, React js, Express js

Backend & Database: Node.js, MongoDB

Tools: Git, GitHub, VS Code

Concepts: REST APIs (used in projects), Basic Web Development

EXPERIENCE

Full Stack Developer | MERN Stack Intern | Appin Technology, Coimbatore, Tamil Nadu **12/2025 to 12/2025**

- **User Management** — Developed a User Management module with full CRUD operations and profile handling, managing API calls through useState, useEffect, and useCallback hooks to reduce redundant renders and keep component state predictable.
- **Pagination** — Resolved admin-side data overload by implementing Server-Side Pagination via Node.js/Express skip & limit, cutting page load time and preventing DOM bloat on high-volume record sets.

Frontend developer | Full Stack Intern | Accent Techno Soft (ATS), Coimbatore, Tamil Nadu **06/2025 to 06/2025**

- **Marketplace UI** — Built Marketplace Management UI in React — rendering Product Catalogue, Cart Engine, and Order Pipeline through scoped GET, POST, PUT, and DELETE Axios calls to REST APIs, keeping each domain independently maintainable**.**
- **Cart Persistence** — Diagnosed and fixed Cart Engine state wipe on refresh by centralizing state with useContext and useReducer, ensuring ADD, REMOVE, and UPDATE actions persisted consistently across Product Catalogue and Order Pipeline**.**

PROJECTS

CarePassport — Healthcare Web Platform

- Built a web-based healthcare platform with **JWT-based dynamic authentication, REST API endpoints**, role-based access for doctors and patient using React(TypeScript),Express.js and MongoDB.
- Handled static credential problem by replacing hardcoded user data with **API-driven authentication** – integrating **AuthContext** (React hooks) and **JWT token flow** for real-time backend validation.

AI-Powered Parental Control System

- Developed a real-time monitoring system with **Node.js agent, Chrome Extension (Manifest V3),Socket.io**, MongoDB Atlas and Twilio SDK – tracking OS-level processes, web activity and network connections
- Resolved real-time alert latency across dashboard and SMS by **integrating Socket.io full-duplex events** alongside **Twilio SDK** – ensuring simultaneous guardian notifications on anomaly detection.

HONORS & AWARDS

- Best Paper Award - ICMRSH 2024 International Conference, SNS College of Technology
- 1st Place - Hack Appsters'25 (24-Hour Hackathon), Sri Ramakrishna College of Arts and Science
